

## **Note Taking App - Bug Fix Notes**

### **What I found broken**

- Hitting refresh after posting a note would post it again, so the same note showed up twice.
- The app was left in debug mode, which is fine for local tinkering but not for a submission build.
- Notes were not always stripped of extra spaces.

### **What I changed**

- Added a redirect after a successful POST so a refresh does not repeat the submission.
- Switched debug off in app.py for the version you submit.
- Trimmed the note text and kept a simple guard against empty input.

### **How to quickly test**

- Run: python app.py then open <http://127.0.0.1:5000>.
- Add a note and check it appears under the form.
- Refresh the page; you should not see a duplicate of the last note.
- Add another note; both should stay visible in the list.

### **Files I touched**

- app.py
- templates/home.html
